

Proof of the Uniform Boundedness Principle

Let X be a Banach space, Y a normed space, and $\{T_n: X \rightarrow Y\}$ a family of bounded linear operators. Suppose:

$$\forall x \in X, \sup_n \|T_n x\| < \infty.$$

We show $\sup_n \|T_n\| < \infty$.

1. For each $m \in \mathbb{N}$, define:

$$E_m = \{x \in X : \sup_n \|T_n x\| \leq m\}.$$

2. Each E_m is closed (by continuity of T_n and taking supremum).

3. $\bigcup_{m=1}^{\infty} E_m = X$, so by Baire Category, some E_M has nonempty interior.

4. \exists ball $B(x_0, r) \subseteq E_M \Rightarrow \forall \|h\| \leq r, \sup_n \|T_n(x_0 + h)\| \leq M$.

5. Then for any $y \in X$, write $y = x_0 + h$ scaled: $T_n y = T_n(x_0 + h) - T_n(x_0)$.

$$\Rightarrow \|T_n y\| \leq 2M \cdot (\|y\|/r + 1).$$

6. Hence $\sup_n \|T_n\| < \infty$.
